

The 8th CanSat Leader Training Program (CLTP8)

First Announcement

Organized by

Sep 2017, Nihon Univ., Japan

What is CLTP?

The CanSat Leader Training Program (CLTP) was established in 2010 to contribute to capacity building in space technology and improve teaching methods-based space engineering education. Education using CanSat will be available in more than half of nations (about 100 nations) in the world by the year 2020.

CLTP 8 offers a unique opportunity for participants to experience a new training tool – **HEPTA-Sat** which is different from CanSat, but suitable for wider purposes on hands-on training of basic space engineering education.

Expected Participants

Future leaders and instructors of basic space technology training. Future collaborators to spread HEPTA-Sat will be welcomed. CLTP graduates are also welcomed.

What is HEPTA-Sat?

HEPTA-Sat hands-on training course puts its focus on establishing the knowledge of system engineering by going through the whole process of system integration. During this course, students will learn how the system is designed to satisfy a mission, how the system's function is broken down into different subsystems, how to integrate those different subsystems into a fully functioning system, and how to test/debug it once it has been integrated.

CanSat Leader
CLTP
Training Program

Date: Online-lecture: August, 2017 (TBC)
Hands-on training: Sep 7-16, 2017

Venue: Nihon University (Chiba, Japan)

Application Due: March 30, 2017

Participation fee:

-Academic Fee: 300,000 yen

-Corporate Fee: 500,000 yen
